

# Question 1

- A: B = 3: 7 and the sum of A and B is 45. Find the value of B.

## Question 2

- Mean proportional between 8 and 72 is:

## Question 3

- A sum of Rs 53 is divided among A, B and C in such a way that A gets Rs 7 more than what B gets, and B gets Rs 8 more than what C gets. The ratio of their shares is:

## Question 4

- If  $4x=3y=2z$ , then  $x:y:z$  is:

## Question 5

- Rs. 3,960 is divided among A, B and C such that half of A's part, one third of B's part and one sixth of C's part are equal. Then B's part is:

## Question 6

- The present ages of a man and his son are in the ratio of 7:2. After 15 years, their ages would be in the ratio of 2:1. What was father's age when the son was born?

# Question 7

- Four years ago, a man's age was 6 times that of his son. 12 years from now, his age will be twice that of the son. What is the ratio of their present ages?

# Question 8

- The ratio of third proportional to 12 and 30 and the mean proportional between 9 and 25 is:

## Question 9

- Three mixtures containing water and alcohol in the ratio of 5:2, 6:1 and 4:3 are mixed in equal quantities. The ratio of water to alcohol in the resulting mixture is:

# Question 10

- Two vessels contain milk and water in the ratio 7:8 and 13:5. If mixtures are mixed in the ratio 1:1, what will be the ratio of milk and water in new mixture?

# Question 11

- Two vessels contain milk and water in the ratio 5:9 and 7:11. If two mixtures are mixed in the ratio 4:3, what will be the ratio of milk and water in new mixture?

## Question 12

- Two vessels contain mixture of milk and water. In first mixture milk is 46.66% and in second mixture, water is 55.55%. If the two mixtures are mixed in the ratio 7:6, find the ratio of milk and water in new mixture.

## Question 13

- Two vessels contain mixture of milk and water. In first mixture milk is 31.25% less than water, in second mixture difference between quantity of milk and water is 11.11% of total mixture. If 10.5 liters of first mixture and 17.5 liters of second mixture are mixed, find ratio of milk and water in new mixture if in second mixture quantity of milk is greater than quantity of water.

# Question 14

- A, B and C join a partnership contributing Rs. 2000, Rs. 1500 and Rs. 1250 respectively. What is A's share if total profit is Rs.3610?

# Question 15

- A starts a business with Rs. 4000. B joins him after 3 months with Rs. 8000. C puts a sum of Rs. 12,000 in the business for 2 months only. At the end of the year, the business gave a profit of Rs. 5,200. Find the share of B?

# Question 16

- Prakash Sunil and Anil started a business jointly by investing rupees 11 lakh, 16.5 lakh and 8.25 lakh respectively. The profit earned by them in the business after three years was 19.5 lakh. What will be the 50% of Anil's share in the profit?

## Question 17

- Vimla and Sujit started a shop jointly by investing rupees 9000 and 10500 respectively. After 4 months Jaya joined them by investing rupees 12500 while Sujit withdraws rupees 2000. At the end of the year was a profit of rupees 4770. Find the share of Jaya.

# Question 18

- Two numbers are in the ratio of 3:5 and the sum of these numbers is 72. Find the difference between two numbers.

## Question 19

- A sum of money is to be distributed among A, B, C, D in the proportion of 5:2:4:3. If C gets Rs. 1000 more than D, what is B's share?

# Question 20

- Two numbers are respectively 20% and 50% more than a third number. The ratio of the two numbers is:

# Question 21

- $x : y = 2 : 3$  find  $(5x+3y) / (3x+5y)$

## Question 22

- Find the fourth proportional to the numbers 3, 4, 6.

## Question 23

- Find a third proportional to the numbers 1.6, 0.4.

## Question 24

- If  $A:B = 2:5$  and  $B:C = 3:4$  and  $D:C = 5:8$ , find  $A:D$ .

## Question 25

- $4A=3B=5C$  what is the ratio of A: B:C.

## Question 26

- If  $A/4 = B/5 = C/7$  then what will be the value of  $(A+B) / (B+C)$ ?

## Question 27

- A: B = 3:5 and B:C 4:5 and if C is 39 more than A then what is the value of B.

# Question 28

- If  $A:B = 4:5$ ,  $B:C = 4:5$ , find  $A:B:C$ .

## Question 29

- $x$  varies directly with cube of  $y$ . When  $y$  is 2,  $x$  is 7.  
What will be  $x$  if  $y$  is 4?

## Question 30

- $x$  varies inversely with square root of  $y$ . When  $y$  is 16,  $x$  is 12. What will be  $x$  if  $y$  is 36?

# Question 31

- The sum of three numbers is 98. If the ratio of the first to the second is 2:3 and that of the second to the third is 5:8, then the second number is:

## Question 32

- Six years ago, A was half of B's age. If the ratio of their present ages is 2:3, what is the total of their present ages?

## Question 33

- Four years ago, the ratio of the ages of Akash and Beena was 3:4. Seventeen years hence, the ratio of their ages will be 6:7. What is the present age of Akash?

## Question 34

- Salaries of Ravi and Sumit are in the ratio 2:3. If the salary of each is increased by Rs.4000, the new ratio becomes 40:57. What is Sumit's present salary?

# Question 35

- The salaries of A, B and C are of ratio 2:3:5. If the increments of 15%, 10% and 20% are done to their respective salaries, then find the new ratio of their salaries.

## Question 36

- A and B together have Rs.1210. If  $(4/15)$ th of A's amount is equal to  $(2/5)$ th of B's amount. How much amount B have?

## Question 37

- Rs.1050 is divided among P, Q and R. The share of P is  $\frac{2}{5}$  of the combined share of Q and R. Thus, P gets:

## Question 38

- A bag contains Rs.120 in the form of One-Rupee, Two-Rupees and 5-Rupees coins in the ratio of 4:3:1. The number of 2-rupees coins is:

## Question 39

- The present ages of A, B and C are in proportions 3:4:5. Seven years ago, the sum of their ages was 75. Then B is older than A by?

## Question 40

- The incomes of two persons are in ratio of 3:4 and the ratio of their expenditures is 2:3. Find the ratio of their savings.

# Question 41

- A sum of Rs.312 was divided among 100 boys and girls in such a way that the boy gets Rs.3.60 and each girl Rs.2.40. The number of girls is:

## Question 42

- The value of diamond is proportional to square of its weight. One such diamond is broken into 3 pieces, weights of whose are in proportion of 1:2:3. If price of original diamond was 54000. Find the loss due to breakage.
