

- 1) Create a node.
- 2) Assign a value to data field.
- 3) Attach the node to the linked list.

a) If the list is empty.

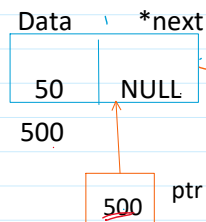

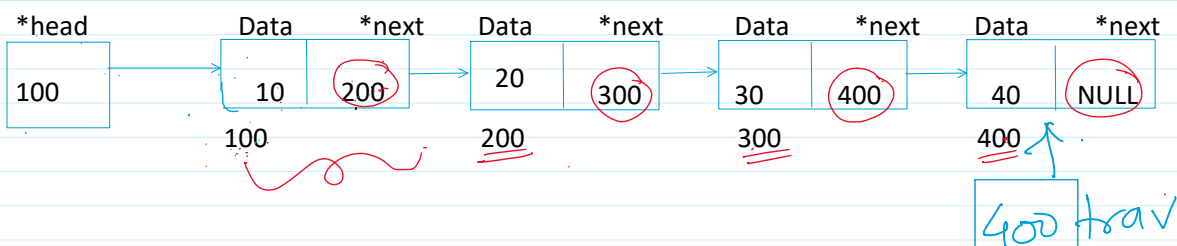

```

If (head == NULL)
{
    head = ptr;
}

```

b) If linked list contains nodes

- 1) Take a trav pointer and traverse till the last node.

```
Struct node *trav = head;
```

```

While(trav->next != NULL)
{
    Trav = trav->next;
}

```

- 2) Attach the new node to the last node.

```
Trav->next = ptr;
```
